SUMMARY

Detail-oriented Software Engineering student specializing in fullstack web development, with hands-on experience building scalable web applications and data automation pipelines. Proficient in Next.js, React, TypeScript, Laravel, and PostgreSQL, with a solid grasp of RESTful APIs, database design, and cloud deployments. Proven track record of delivering end-to-end multi-tenant systems and working independently in distributed or remote environments.

WORK EXPERIENCE

Fullstack Web Developer **Feb 2024 – Present**

- Architected and deployed scalable fullstack web applications for clients and institutions using Next.js, React, TypeScript, and Laravel.
- Built MTSMUHBMS, an integrated digital library management system supporting multi-tenant access across multiple school institutions, utilizing Prisma ORM and PostgreSQL.
- Designed responsive, modular UI components with Tailwind CSS, improving cross-platform user experience and interface accessibility.
- Managed client communication, sprint planning, and asynchronous project delivery across remote collaboration tools.

BiC-SMART Research Project (UMP & Banyumas Regency) **Sep 2026 – Oct 2026**

- Developed automated ETL data pipelines in Python (pipeline_kobo_to_spss.py) utilizing pyreadstat and pandas to streamline KoboToolbox survey extraction.
- Transformed and validated health research survey datasets into structured SPSS formats, reducing manual data processing time by over 80%.
- Collaborated with cross-functional research teams to guarantee strict data integrity, schema consistency, and reporting accuracy.

Community Service Project (KKN Kelompok 006 UMP) **Jul 2026 – Aug 2026**

- Built and launched the official community portal for Karang Taruna Jaya using Google Sites, boosting public digital accessibility for local MSMEs.
- Developed automated certificate generation pipelines using Python (Pillow, openpyxl), automating personalized certificate delivery for thousands of records.
- Designed an automated ultrasonic-based height measurement hardware prototype (Arduino Uno, HC-SR04, I2C LCD) to improve village healthcare monitoring accuracy.

EDUCATION

Bachelor of Informatics (Computer Science) **Sep 2023 – Present**
Universitas Muhammadiyah Purwokerto

- Specialization: Software Engineering (Rekayasa Perangkat Lunak).
- Relevant Coursework: Web Programming, Advanced Web Programming, Mobile Application Development, Advanced Mobile Programming, Database Systems.

ADDITIONAL INFORMATION

- Technical Skills: JavaScript/TypeScript, React, Next.js, Laravel, PHP, Python, Tailwind CSS, PostgreSQL, MySQL, Prisma ORM, Docker, Git/GitHub, REST APIs.
- Languages: Indonesian (Native), English (Professional Working Proficiency).
- Tools & Platforms: Linux/Ubuntu, VS Code, Postman, Cloudflare Tunnel, Figma, KoboToolbox, SPSS.
- Awards/Activities: Head of UKM Sun Sinema UMP (2025–2026)
